

Genetic Drift

Meet Gary 3, a human/creature hybrid who has come to visit us from the future to tell us about the circumstances of his life and the world. Welcome to *Genetic Drift*.

Genetic Drift introduces a world where global temperatures have risen, and so in response to impending extinction, society has spliced human DNA with life forms that can survive in extremely high temperatures. This show explores not only the ramifications of climate change, but also the ethics of science.

Multi-media elements, along with Gary's intimate visit create a truly immersive experience not to be forgotten!

Genetic Drift is being presented as a part of [Boca del Lupo's](#) Micro Performance Series at The Fishbowl on Granville Island for the following:

April 5th - 9pm

April 6th - 7:30pm and 9pm

April 7th - 7:30pm and 9pm

April 8th - 2:30pm, 7:30pm and 9pm
